ABIOLA MAKINDE

Product Designer (UX • Content • No-Code)

8 years of experience shipping product; my work spans interface design, design systems, motion, branding, and front-end build. I'm and increasingly, using AI tools dynamically to collapse the distance between concept and production.

EXPERIENCE

Product Designer • Lethe

Jan 2026 - present

Conceived, designed, and shipped Lethe from zero: a high-fidelity super-connector and intent-based networking engine, personally owning every layer of the product from foundational UX strategy and information architecture through to high-fidelity interface design, motion, and front-end implementation.

Validated the core concept through 16 structured conversations with founders and operators, achieving a 100% early access request rate and growing a waitlist to 100+ signups within the first week of the landing page going live at lethe.so.

Built and deployed a fully interactive React/TypeScript/Vite prototype to GitHub Pages using AI-assisted development workflows, demonstrating the product's connect-first experience and signal-based matching concept to investors and early users.

Architected a three-layer data model (declared identity, behavioral signals, and public data) underpinning the AI matching engine, and documented a full 15-week ML pipeline build plan covering the two-tower model, CEP framework, feed algorithm, and HITL connections manager.

Took the investor pitch deck through five major iterations, sharpening the narrative from feature-led to connect-first positioning, and presented materials at a virtual VC founders conference.

Product Designer • Persana

Jun 2024 - Jan 2026

Served as the sole designer across the entire Persana platform, owning end-to-end UX from research and wireframing through to high-fidelity delivery and design system maintenance, operating without a design team or handoff buffer at any stage.

Built and maintained a scalable design system that standardized UI patterns across the product, reducing design-to-engineering friction and accelerating feature delivery cycles.

Designed and built interactive landing pages in Framer that gave the marketing team full editorial control over updates, eliminating engineering dependency for campaign and content changes entirely.

Managed LinkedIn content strategy and creation from the ground up, producing a consistent cadence of posts that drove a 36% increase in impressions and a 22% growth in followers over the engagement period.

Designed the full suite of investor pitch materials (decks, one-pagers, and visual assets) that supported Persana's $2.3M seed round raise.

Conducted user research and translated findings into documented design guidelines that became the reference standard for product decisions across the team.

Persana officially merged with Rox in April 2026.

Product Designer • Teder

Jun 2022 - Feb 2024

Joined as an early-stage design hire and operated across Teder and a portfolio of contracted products built for the founder, covering UX design, brand design, research, prototyping, and front-end implementation simultaneously.

Designed functional, data-rich multi-user dashboards tailored separately for distinct user groups (sales agents and sellers), translating complex business requirements into visually advanced, highly usable interfaces through close collaboration with cross-functional teams and stakeholders across the full design lifecycle.

Led end-to-end product design and front-end build across several contracted platforms: a global extended-stay hotel booking product, a matchmaker-to-client platform (covering user research, product strategy, and prototyping), a B2B recommerce marketplace for bulk FF&E transactions (as one of two designers), and a niche contractor-to-client matching platform for specialist skills.

Produced high-fidelity wireframes, interactive prototypes, and user flows across all projects, iterating continuously based on user and stakeholder feedback to sharpen usability, data clarity, and conversion across diverse product types.

Branding & Research Specialist • Opteamize

May 2022 - Oct 2022

Designed and executed a content strategy to grow brand awareness and sharpen market positioning, encompassing an SEO roadmap, marketing materials, and online promotional campaigns tied to feature launches, events, and seasonal initiatives.

Grew Opteamize's LinkedIn audience by 41% over the engagement period through consistent, on-brand content and a campaign architecture that generated organic user-generated content at no additional cost (including an interview series that drove community participation and brand advocacy).

Developed a tone of voice blueprint and conducted competitive intelligence research that produced a clear, actionable picture of market dynamics, differentiators, and positioning risks across the product portfolio.

Carried out structured audience research and implemented findings through targeted messaging frameworks, ensuring all content and calls to action were mapped to audience segments, company values, and customer personas with precision.

Designed marketing campaigns for key product moments including feature launches and community events, balancing brand storytelling with conversion-focused copy across channels.
